Contents

- Length and timescales for functional materials
- Ultrafast science at XFELs
- Optical pump – X-ray probe techniques
- Difference signals
- Structural information without crystals
- Ru=CO Donor-Acceptor systems
- Mapping coherent structural changes
- New materials

Timescales of functions in functional materials

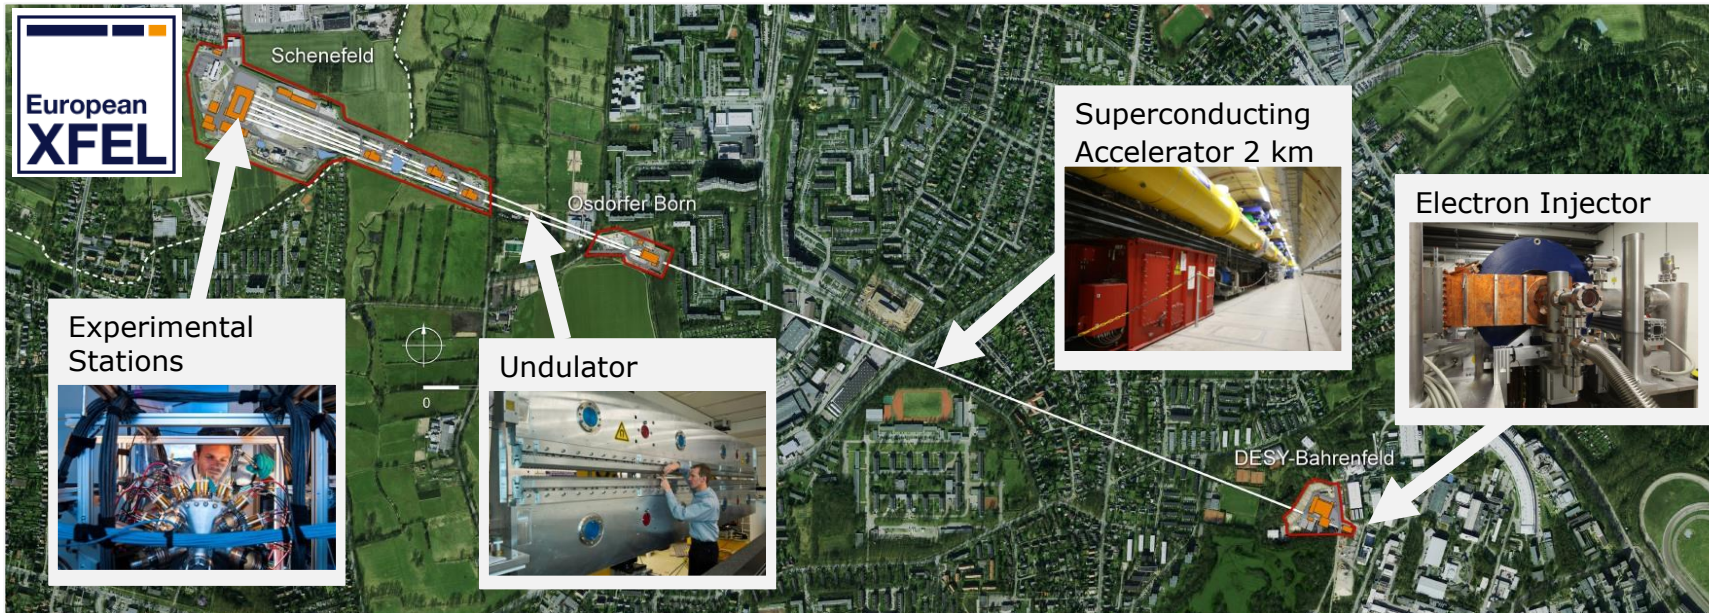

We need: 0.01-10 nm length scales and 10 fs – 100 ps timescales

XFELs: short and intense x-ray pulses

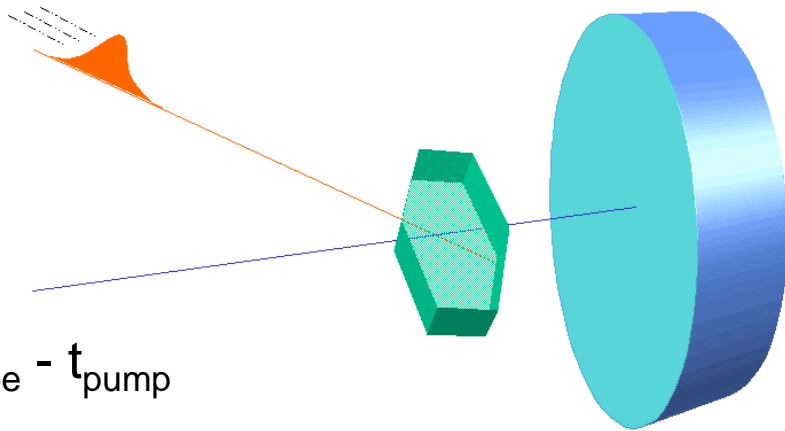

Peak brilliance

- XFELs pack the same x-ray power in 100 fs as most synchrotrons do in 1 second
- High peak brilliance (many photons per time on the sample, **up to 10^{20} W/cm²**)
- Ultra short pulses (femtosecond time resolution, 'diffract before destroy', **1 – 100 fs**)
- Coherence (imaging, correlation spectroscopy, **Fully transverse, Partially temporal**)

Short x-ray pulses: Capturing fast processes with pump-probe

Laser pump
X-ray probe

$$\tau = \Delta t = t_{\text{probe}} - t_{\text{pump}}$$

Sample delivery – replenish sample between shots:

Fast-flowing 50-300 μm liquid jet, [c] = 1-100 mM

X-ray
probe
pulse

Laser
pump
pulse,

**No long-range
order** in sample

-> only "diffuse"
scattering

Tracking processes
while they occur

(Muybridge, Stanford
1878, the first film)

Short x-ray pulses: Capturing fast processes with pump-probe

Laser pump
X-ray probe

$$\tau = \Delta t = t_{\text{probe}} - t_{\text{pump}}$$

Sample delivery – replenish sample between shots:

Fast-flowing 50-300 μm liquid jet, $[c] = 1\text{-}100 \text{ mM}$

X-ray
probe
pulse

Laser
pump
pulse,

**No long-range
order** in sample

-> only "diffuse"
scattering

Tracking processes
while they occur

(Muybridge, Stanford
1878, the first film)

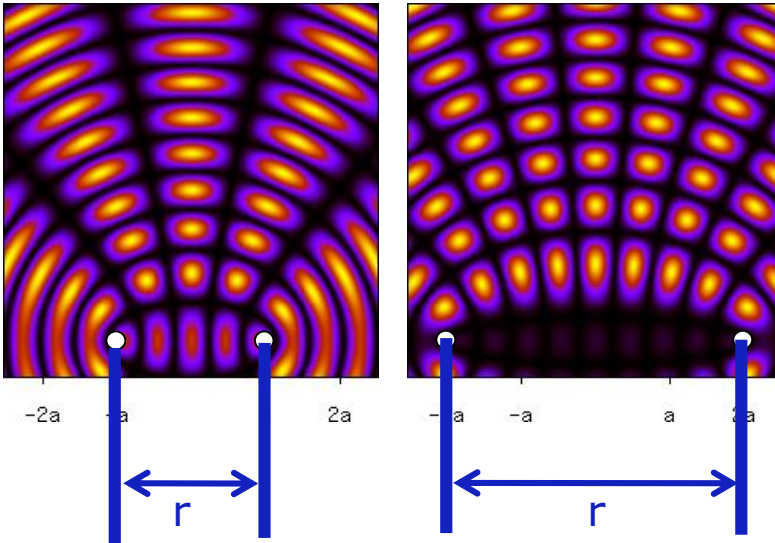

Scattering from a molecule - *without crystals*

Total scattering length of the molecule is:

$$F^{mol}(\mathbf{Q}) = \sum_{r_j} f_j(\mathbf{Q}) e^{i\mathbf{Q} \cdot \mathbf{r}_j}$$

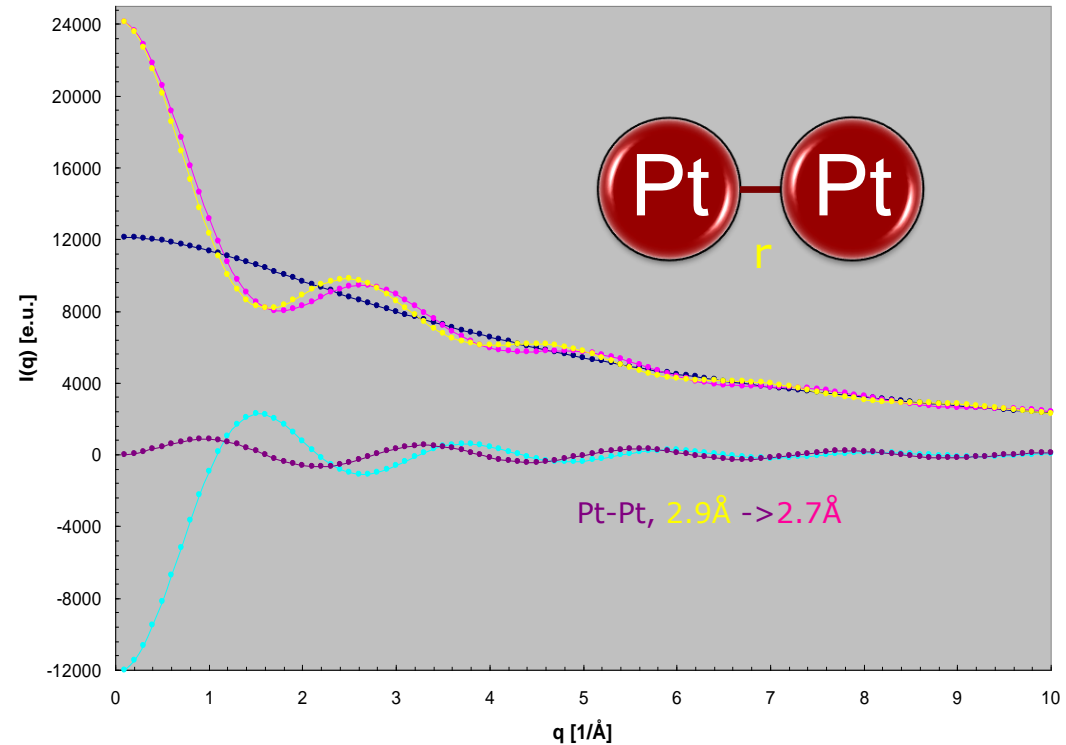

Total scattered intensity:

$$I(\mathbf{Q}) = |F^{mol}(\mathbf{Q})|^2$$

Randomly oriented molecules,
the Debye formula:

$$S(q) = \sum_{i,j} f_i(q) f_j(q) \frac{\sin(q r_{ij})}{q r_{ij}} \rightarrow \begin{cases} (\sum_i Z_i)^2 & \text{for } q \rightarrow 0 \\ \sum_i f_i^2(q) & \text{for } q \rightarrow \infty \end{cases}$$

X-ray scattering from liquids

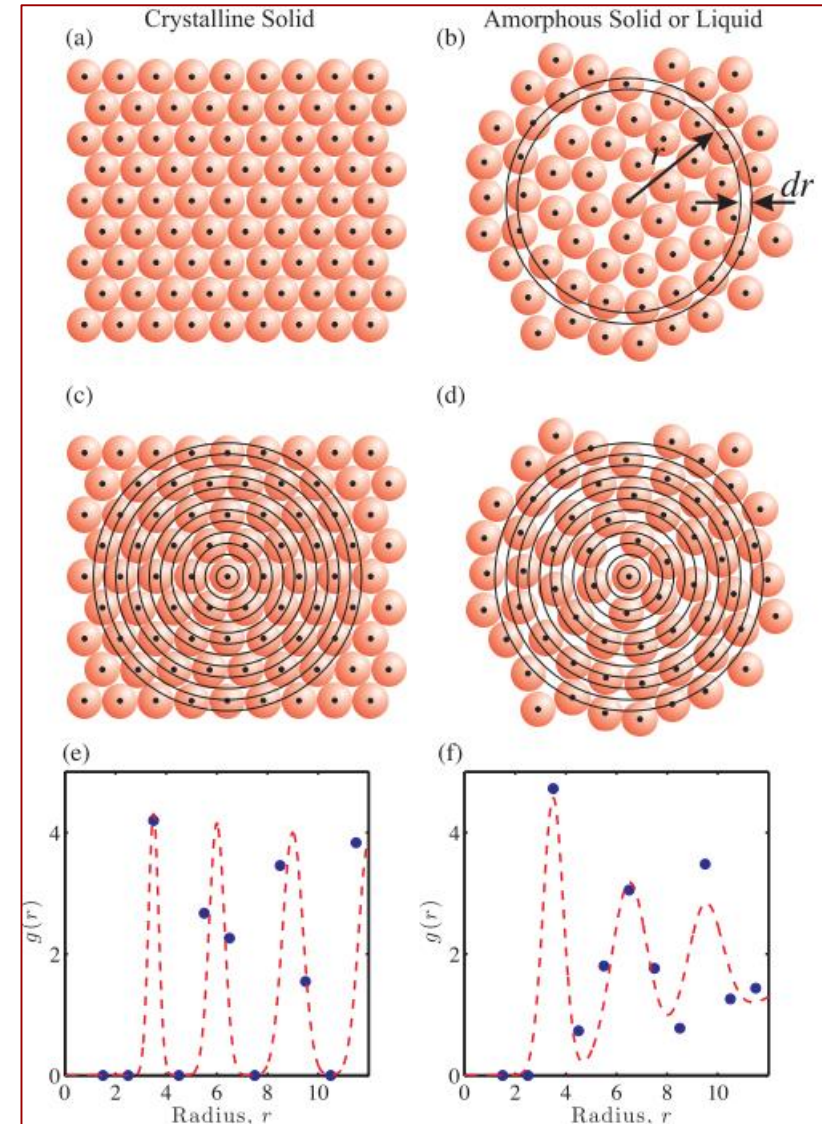

Scattering from a liquid

$$S_v(q) = \sum_l N_l f_l(q)^2 + \sum_{l,m} f_l(q) f_m(q) \frac{N_l(N_m - \delta_{l,m})}{V} 4\pi \times \int_0^{R_{\text{box}}} r^2 [g_{l,m}(r) - 1] \frac{\sin(qr)}{qr} dr$$

Zoom in on structural dynamics of Co(terpy) at LCLS

Elisa Biasin

GROUND STATE : LS

EXCITED STATE: HS

$$\Delta d_{\text{Co-Naxial}} \sim 0.16 \text{ \AA}$$

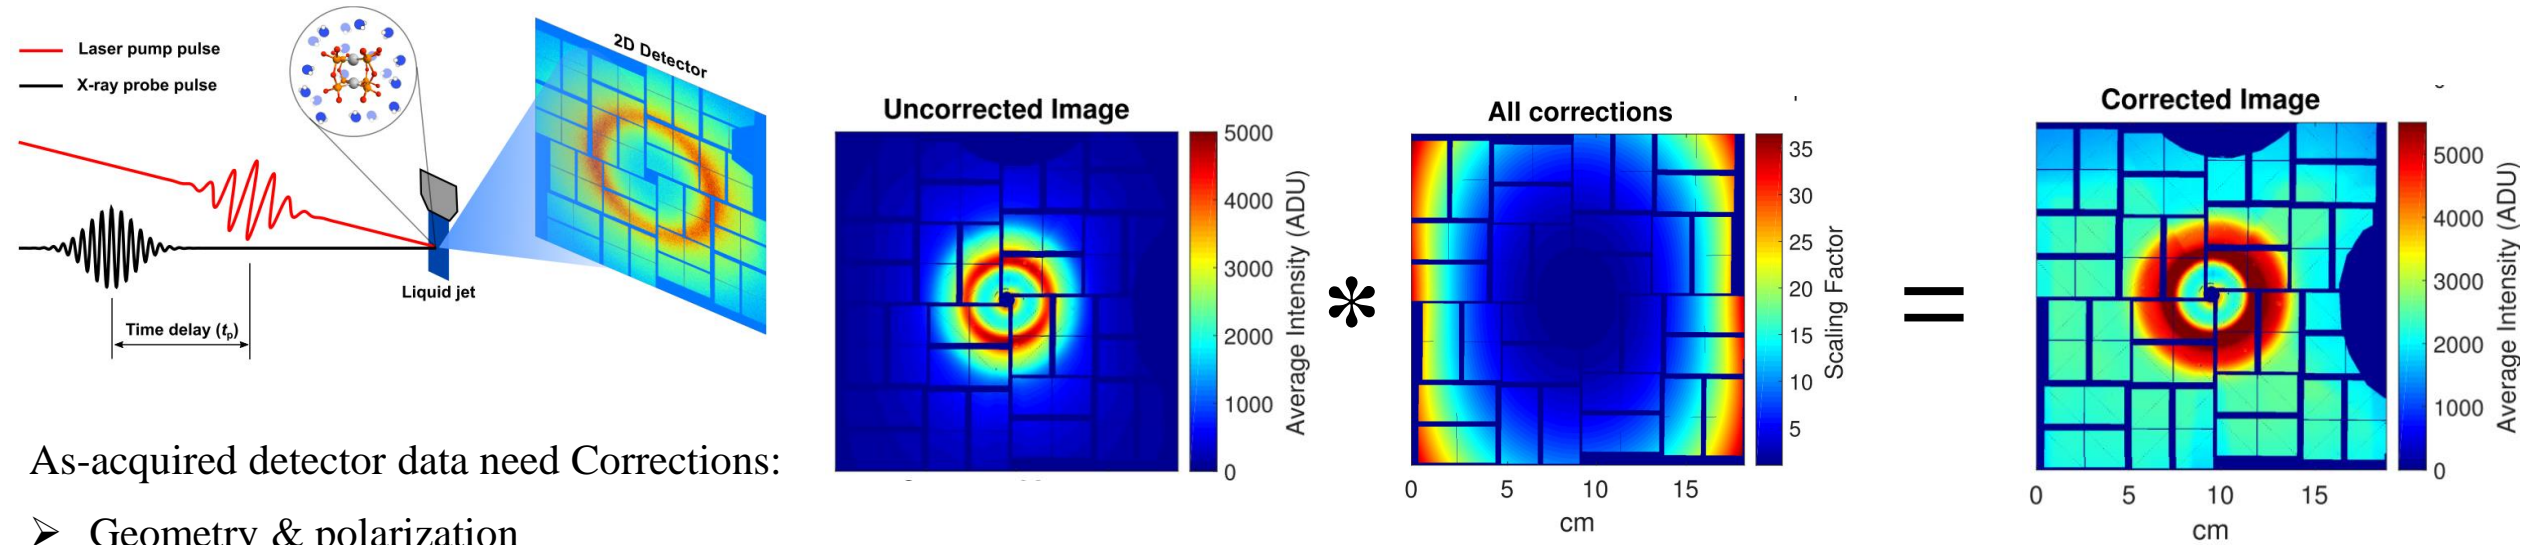

$$\Delta d_{\text{Co-Nequatorial}} \sim 0.08 \text{ \AA}$$

DFT model of LS and HS structure as basis for solute structure model

Need better data to discern differences

	LS	HS
$d_{\text{Co-Naxial}} (\text{\AA})$	1.902	2.058
$d_{\text{Co-Nequatorial}} (\text{\AA})$	2.08	2.16
η	0.91	0.95

Disentangling detector data

As-acquired detector data need Corrections:

- Geometry & polarization
- SVD-based linearization of detector response as function of E_{X-ray} and I_{X-ray}

-> 150 differences images averaged per 10 fs time bin

... but Fe has a much shorter excited state life time than Ru – too short for efficient charge extraction

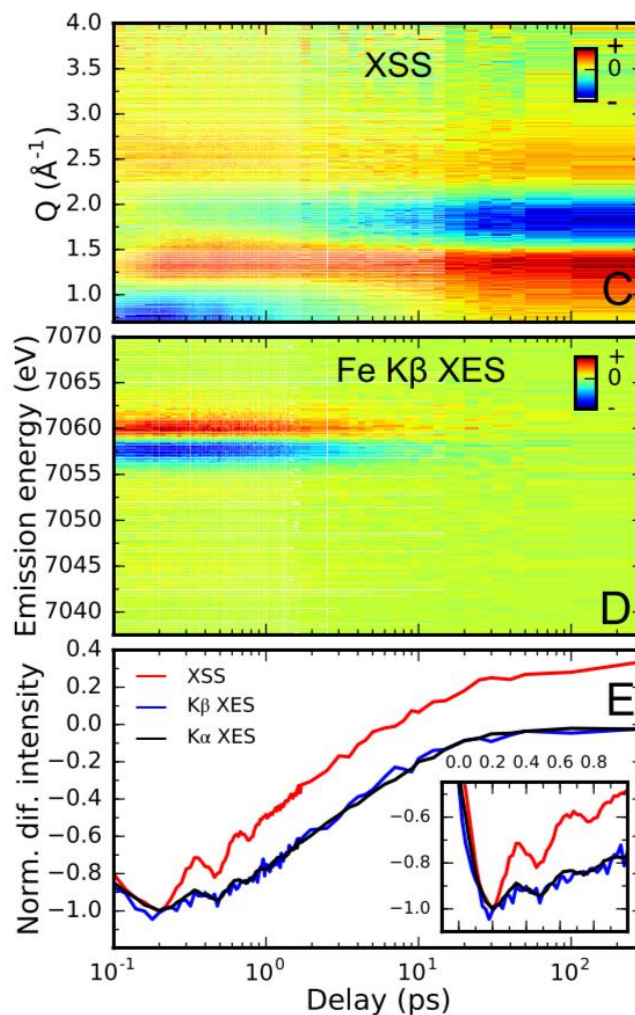

Can we identify and modify the properties of iron-based compounds to enable Fe-based photosensitizers

Combined XES and scattering on $\text{Fe}(\text{bpy})_3$

Kjær et al, Chem Sci 2019

Combined XES and scattering on FeCAB

XES structural sensitivity due to core-level vibronic coupling between $1s$ and $2p$ core-ionized states

Summary

Novel iron-based compounds for use as photo-sensitizers appear promising, and share some of the properties of "conventional" ruthenium-based sensitizers

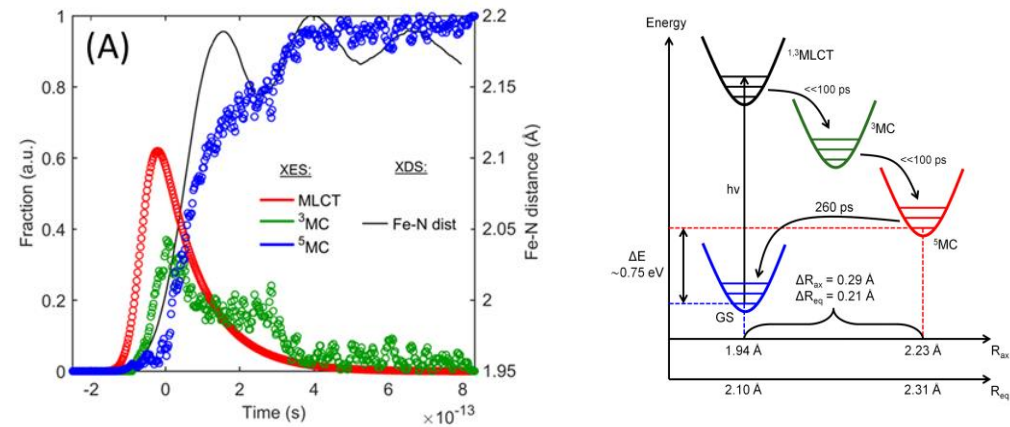

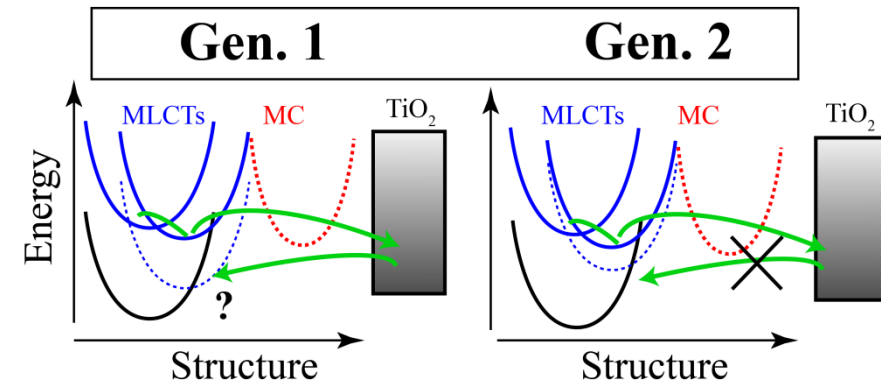

Quantitative information on the excited-state potential landscape(s) is necessary for rational design of even-better compounds

Combined studies, where the complementarity of XES and XDS is utilized, yields access to:

- Time-dependent electronic configuration
- Time-dependent structure
- Energy release to solvent
- Details of the solvent-solute interactions

Iron-based photo-sensitizers

Thank you for your attention
